APIs

Models

Gambody has a rudimentary API for accessing the published models' public data. The endpoint is https://www.gambody.com/api/model/. The API only supports one method, described below.

List method

/list: returns a JSON list of models.

Parameters

- **pageSize** integer: controls the size of the returned list. Can not be greater than 1000. Defaults to 100.
- **page** integer: indicates which page of the result to return

  Example: *GET https://www.gambody.com/api/model/list?pageSize=200&page=3*

Response Fields

The returned JSON array contains objects representing models. Some available fields are:

- **name** the name of the model
- **text** a long HTML description
- **metaDescription** a shorter, textual description
- **absoluteUrl** the URL where the model is available on Gambody
- **images** a list of images for the model. Each image is an object containing an **absoluteUrl** field among others

Google Products

CSV Format: *https://www.gambody.com/api/model/google-products*
